

ONE WAY

One Way is a navigation app where the user can go from one location to another, only once. After a trip finishes, a 1000 feet radius around your starting and ending location will be colored out. These locations will never come back! The user will never be able to start or end a journey at this specific area ever again, nor will they be able to see any landmarks within this area. The user functionally makes any place they travel to or from a null zone.

The user is allowed to start a route from any inclusion zone to any inclusion zone, and the exclusion effect occurs only once the route has finished and the user drove on at least .5 miles of the real route.

Using this app may invoke feelings of being lost. You may start to doubt your navigating abilities, or become anxious trying to go anywhere efficiently. Or you can feel empowered by overcoming this hindrance, and use exploratory strategy to navigate the world around you! Your navigating confidence may even improve while you use this app, but only you can find that out.

FUNCTIONS:

- Navigation App/Tracker
- Navigation Challenge
- Brings insight into our dependency on technology to navigate the world
- Increases spatial awareness
 - Improves memory

STRATEGIES:

- Start navigating midway through journey
- Start navigating from a road you know how to get to
- Start/End journey outside real endpoints
